PROFESSIONAL SUMMARY

Computer Science undergraduate at the University of Greenwich with a strong interest in AI, data science, and software engineering. Enjoys identifying real operational problems and building working prototypes to address them, using AI-assisted development tools (Claude Code, ChatGPT, Cursor) to learn efficiently and move quickly from idea to working software. Currently building an AI-powered restaurant operations prototype informed by first-hand hospitality experience. Seeking an internship at a startup where I can contribute immediately while continuing to develop depth in machine learning and software engineering.

EDUCATION

University of Greenwich — BSc (Hons) Computer Science

Expected Graduation: [06.2028]

Relevant modules: Artificial Intelligence, Advanced Programming, Algorithms & Data Structures, Operating Systems, Information Security

PROJECTS

AI Restaurant Operations Assistant — Prototype

- Identified a recurring staffing and scheduling problem while working as a restaurant server, then scoped and built a prototype to address it.
- Built a rule-based system that forecasts customer demand, recommends staffing levels, and auto-generates staff rotas from simulated operational data.
- Added an AI-generated explanation panel so managers can see the reasoning behind each recommendation, plus an interactive dashboard to visualize forecasts and staffing plans.
- Currently a working prototype using simulated data and rule-based logic; next milestone is training machine learning models on real restaurant data to replace the rule-based approach.
- Built with Python, using Claude Code to accelerate development while owning the product decisions and system design myself.

Spotly

- Built a student-focused web application to help students quickly find available study spaces on campus.
- Implemented user authentication with Firebase and a responsive interface using React, Next.js, and Tailwind CSS.

Landing Page Website for Furniture Shop

- Built a beginner-level landing-page for small Furniture Shop
- Used JavaScript, HTML, CSS

TECHNICAL SKILLS

Programming: Python, JavaScript, HTML, CSS, SQL (Basic)

Frontend: React (Basic), Next.js (Basic), Tailwind CSS, Firebase

Tools & AI-Assisted Development: GitHub, VS Code, Claude Code, ChatGPT, Cursor

Currently Learning: Machine Learning, FastAPI, PostgreSQL, Data Science, Cloud Technologies

EXPERIENCE

Junior Data Analyst — IMB Logistics

Uzbekistan

- Maintained and analysed large operational datasets in Excel, tracking shipments and logistics records.
- Identified inconsistencies in shipment records and corrected them to improve data accuracy.
- Produced regular operational reports used to support day-to-day business decisions.

Restaurant Server — Sophie's Steakhouse

London

- Delivered consistent, high-quality customer service in a fast-paced hospitality environment.
- Collaborated closely with kitchen and front-of-house teams to keep service running smoothly during peak hours.
- Observed recurring staffing and scheduling challenges, which directly inspired the AI Restaurant Operations Assistant project.

LEADERSHIP

Treasurer, Travel Society, University of Greenwich — Managed society funds and budgeting for events and trips.

Event Support, Social Media Manager, AlphaBeta Computer Science Society, University of Greenwich — Supported the team during events, run a social media (Instagram) page of the society.

CERTIFICATIONS

C++ Builder Course Completion Certificate from IT Park Margilan city (10.2022)

LANGUAGES & INTERESTS

Languages: English, Uzbek, Russian (Basics), Turkish (Basics)

Interests: AI, Data Science, Machine Learning, Software Engineering, Startups, Restaurant Technology
